Lasting Partnership is the result of total Customer care

In every sphere of life drugs play a vital role in saving the ailing and restoring the balance of health for human beings to lead a normal and healthy existence and in this scenario it is important that timely research & development and delivery of Intermediates & API's is required to be introduced. Atlanta Associates have created ripples in developing a unique niche in Pharmaceuticals, positioning as one of the leading experts having thoroughly understood the dynamics of Intermediates & API's, Pellets & Granules in ready to fill form, Chemicals, Excipients, Nutraceuticals and Pharmaceutical finished formulations.

New economic, technical and regulatory barriers are dramatically changing the pharmaceutical world – making it more challenging than ever to find profit opportunities. That's why it's important to work with Atlanta Associates who has professionalized and knows how to identify the most lucrative opportunities – and how to help you quickly overcome obstacles to get to market first and gain a competitive advantage.

www.atlantapharma.com

Atlanta Associates, founded by a group of experts, established on 15th August 1986 is engaged in the business of offering specialized API's, Intermediates, Pellets & Granules in ready to fill form, Excipients, Chemicals, Nutraceuticals and Pharmaceutical finished formulations, entered as a leading company, with a mission to provide world class healthcare products and services in domestic as well as international market.

Vast manufacturing resource pool of India on one hand and techno-economic expertise of our founding members on the other hand, gives us a cutting edge to offer high quality products with attractive prices and other commercial terms.

Each member of the team has gained several years of active experience and today, Atlanta Associates stands on the threshold of rapid expansion globally and the future holds the promise of growth having commitment to be on the ball throughout the Globe.

The company works with quality conscious manufacturers in India and reliable manufacturers as well as trading houses mainly from China, Europe, Taiwan and Japan and has a strong edge in sourcing new molecules and rare products.

Since past 26 years Atlanta Associates has been supplying the generic pharmaceutical industry with high-quality, strategic active pharmaceutical ingredients (API's) and their Intermediates – manufactured by the finest cGMP / WHO-GMP manufacturers and is also manufacturing on loan license its own prestigious brands of Pharmaceutical formulations in different dosage forms like tablets, capsules, injections, liquid orals, sterile powder for Inj., dry powder for oral suspension, Eye/Ear drops, Skin/Eye ointments and Powder & Granules.

We search for and find the ingredients you need. At Atlanta Associates we invest the time and expense to source and select the highest quality raw materials available while staying within the client's pre-determined finished product manufacturing budget. Many of our raw material suppliers offer trademarked or patented raw material brands. Product labels that display the logos of reputable raw material suppliers are more readily recognized by consumers. Our private label clients reap the many benefits of Atlanta Associate's professional relationships with selected raw material suppliers including advertising, marketing and educational support programs.

We are confident that you will be satisfied with the quality and competitive pricing of our Intermediates, API's, Pellets & Granules in ready to fill form, Excipients, Chemicals, Nutraceuticals and Pharmaceutical finished formulations – and that they will meet or exceed the standards of your company and regulatory agencies. Our Satisfaction Guarantee is a unique benefit of doing business with Atlanta Associates.

HERBAL FORMULATION

Herb is a plant or plant part used for its scent, flavor or therapeutic properties. Herbal medicines – also called botanical medicine or phytomedicine – refers to using a plant's seeds, berries, roots, leaves, bark or flowers for medicinal purposes and are one type of dietary supplement. They are sold as tablets, capsules, powders, teas, extracts, and fresh or dried plants. Herbalism has a long tradition of use outside of conventional medicine. It is becoming more main-stream as improvements in analysis and quality control along with advances in clinical research show the value of herbal medicine in the treating and preventing disease. Herbal medicine is used to treat many conditions, such as asthma, eczema, premenstrual syndrome, rheumatoid arthritis, migraine, menopausal symptoms, chronic fatigue, irritable bowel syndrome, and cancer, among others. Herbal supplements are best taken under the guidance of a trained healthcare provider. People use herbal medicines to try to maintain or improve their health.

Plants have been used for medicinal purposes long before recorded history. Ancient Chinese and Egyptian papyrus writings describe medicinal uses for plants as early as 3,000 BC. Indigenous cultures [such as African and Native American] used herbs in their healing rituals, while others developed traditional medical systems [such as Ayurveda and Traditional Chinese Medicine] in which herbal therapies were used. Researchers found that people in different parts of the world tended to use the same or similar plants for the same purposes. In the early 19th century, when chemical analysis first became available, scientists began to extract and modify the active ingredients from plants. Almost one fourth of pharmaceutical drugs are derived from botanicals.

Recently, the World Health Organization estimated that 80% of people worldwide rely on herbal medicines for some part of their primary health care. In Germany, about 600-700 plant based medicines are available and are prescribed by some 70% of German physicians. In the past 20 years in the United States, public dissatisfaction with the cost of prescription medications, combined with an interest in returning to natural or organic remedies, has led to an increase in herbal medicine use.

Atlanta Associates undertakes contract manufacturing of Herbal medicines at ultra modern manufacturing plants specializing in Super Critical Fluid Extraction, the most advanced extraction technology and the extracts dedicated to flavors, fragrances, Nutraceuticals, Pharmaceutical / Food ingredients, Cosmetic ingredients, Concentrates of natural botanicals for spice and condiments, fruit juice concentrates etc. producing a novel range of products to the specifications and satisfaction of our customers enabling us to meet the increasingly stringent statutory regulations of FDA and other such health organization. Process begins with selecting herbs from their net worked herbs growers of the right quality followed by its pharmacognostic evaluation for strength and efficacy. Dried herbs are then specially weaned and sometimes treated to enhance its quality. Personnel from both function works very closely together to ensure compliance with the exacting standards demanded by our customers. All products are manufactured and analyzed by a highly qualified and experienced team of chemists ensuring quality products to our valued clients all over the world. The dedication of the people and new innovations in manufacturing technologies of our supporting manufacturers, have enabled us to contract manufacture the highest quality products for our customers cost-effectively.

The Quality Assurance function is an integral part of our supporting manufacturers production process validated by GMP norms having the capability to undertake analysis of almost any parameter that is required. Essential good laboratory practices including safety, cleanliness and hygiene are strictly enforced. Standard Operating Procedures, approved record-keeping and documentation procedures for method validation are carefully maintained and in absence of internationally acceptable testing protocols for analyzing herbal extracts and allied products, many of the testing methods used have been developed in-house and are validated with an analytical certificate. Our supporting manufacturers maintain a very comprehensive database of results to enable proper tractability.

Medicines That Contains Goodness Of Nature And Perfection Of Science

We provide flexible pharmaceutical solutions enabling our customers to accelerate their route to market quickly, safely and cost efficiently. We differentiate our capabilities from competitor companies by maintaining a flexible, personal and responsive service to satisfy individual customer requirements. We are associated with a long list of prestigious clients situated all over the world. Last but not the least, we endeavor to develop and maintain a never ending relationship with our honored clients.

We recognize the importance of continuous dialogue and feedback. Regular meetings with customers - as well as product performance review - provide not only the opportunity to discuss work objectives and progress towards these, but also to plan any further product development that may be required to achieve the objectives, and to consider long-term business relationship.

Our vision is to create waves in global healthcare industry by providing cost effective & accessible pharmaceutical products regardless of race, gender, social or cultural background.

Food Color

From ancient times people have been coloring food, drug and cosmetic products. Like, our ancestors used color such as saffron to color certain food. Also many behavioral studies show that the human appetite and choice of food are influenced by colors. Thus people all over the world are using food colors to give a pleasant look to their foods. Primary Food colors are water-soluble and exhibits coloring power when it is dissolved. Synthetic Food colors are in more use than the Natural colors, because of availability of wide hue range and competitive prices.

Lake Colors

Lake Colors are dispersible in vegetable oil, and can be mixed with fats, oils, etc. They can also be dispersed in suspension of propylene glycol or sucrose [water or sugar].

Lake colors, being relatively inert absorption compounds, are very adaptable and versatile. Because of their good dispersion properties, an almost infinite variety of products can be colored with these pigments.

Lake colors are more stable than the water-soluble colors, thus it is widely used in Cosmetic & Pharmaceutical industry. Lake Colors are available in three concentrations 15-22 %, 23-30%, 31-38%.

FD & C COLOUR

Complete range of FD & C (Food Drug & Cosmetic) Colors, which are approved by USFDA.

FD & C colors allowed to be used in food, drugs and cosmetic products subject to USFDA regulations
